

# Plant Seed Spacing Vs. Emerged Plant Spacing

After collecting data in the field, Sentera renders the captured aerial imagery. Sentera's proprietary machine learning platform processes the image to determine emerged plant counts, size, spacing and emergence statistics. The Coefficient of Variation (CoV) is recalculated after processing, showing differences between initial planting seed spacing CoV and the emerged plant spacing CoV.

## Sentera Seed Spacing (Emerged Plants)

Plant Spacing CoV = .4196

## Planter Seed Spacing

Seed Spacing CoV = 0
